FAQ'S

How do the USB ports work? - The USB ports work exactly the same as if you plug your phone into a plug socket at home. The ports are connected to Hubs that house the power that is sent to them from the batteries. The power then runs through the cable and charges the device that is connected to the USB Port

Is it safe and secure? - Yes, we have staff at the trailer throughout the day as well as the trailer is chained while at the event. No lockers are accessible from inside the trailer. Security to be provided by the festival and or event

How does the key system work? - Each person who receives/books a locker will receive a key with a clip that they will have on their possession until they are finished with their locker. Upon closure of the event, the key is returned at the registration table

Travel costs: Transport is based on AA Rates and accommodation is for clients account

The Batteries:

What happens if there is no sun to charge the unit? – All batteries arrive fully charged and if there is no sunlight then we are able to use the event office to charge them via the electricity mains

How are the batteries charged? The batteries are charged through the solar panels that take in the sunlight sending power to the battery where it is stored and sent from there to the power hubs then to the lockers

What type of batteries are they? Lithium batteries
